

Express Delivery XT™ System

Automated Teller Cash Dispensing System

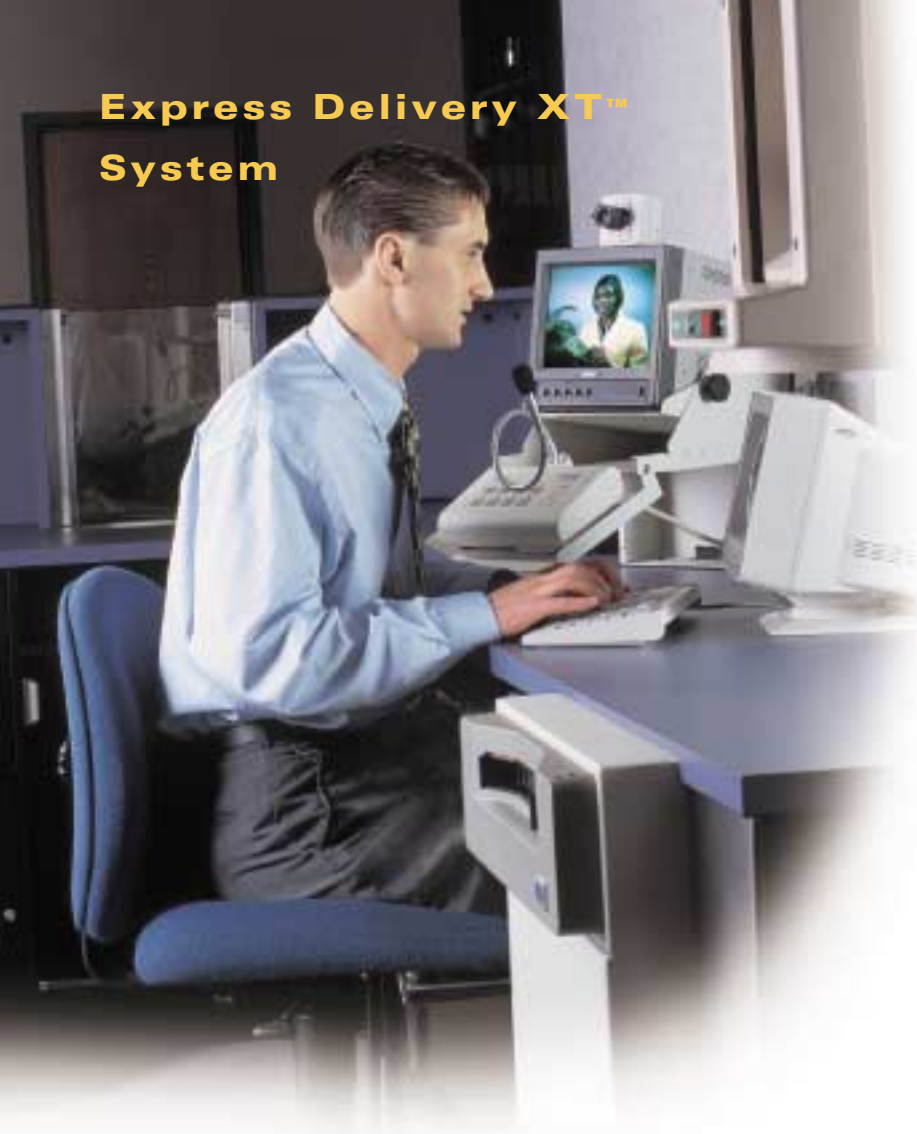

Enhanced capabilities
boost productivity, customer
satisfaction and security while
reducing costs in your teller
cash-dispensing operations.

Even better accuracy, reliability and increased productivity

DIEBOLD

Express Delivery XT™ System

- *Boosts productivity* by eliminating the time your tellers spend counting and recounting cash, allowing tellers to serve up to twice as many customers per hour, with increased accuracy and reliability.
- *Increases customer confidence* since cash is now counted mechanically.
- *Strengthens security* by reducing internal fraud opportunities and maintaining security of funds in the event of a robbery.
- *Contains costs*, because increased transaction speed and volume in the teller line are achieved without hiring additional staff, and without costly renovation or expansion of your branch facilities.
- *Reduces teller cash setup* at start of day and also time needed to balance at end of day.

Total solution

response to your cash-dispensing security and productivity challenges.

Response targeted at your most critical priorities.

Every institution that handles a significant volume of cash-dispensing transactions faces four critical performance priorities: increasing transaction efficiency, improving customer satisfaction, strengthening security and containing costs.

With the Express Delivery XT™ System, Diebold optimizes the ability of financial institutions to meet each of these priorities. Performance-designed to maintain your competitive edge, Express Delivery XT:

Express Delivery XT's vault buy function allows tellers and supervisors to access and receive cash as needed from a secure Express Delivery XT unit. This can save 5 to 7 minutes on each vault buy with no more need for dual controls when going to the vault.

Easy integration with teller environments and branch procedures.

Solutions can be provided to integrate Express Delivery XT into your branch teller environment and to implement features that facilitate your branch procedures, including cash management and overall balancing. Because Express Delivery XT is designed for compatibility, adding it to many existing teller systems is simple.

Express Delivery XT design flexibility.

Express Delivery XT offers:

- New, enhanced Express Delivery XT Dispenser offering increased reliability and performance even in the most rigorous environments.
- Stand-alone operation or interface with your on-line system.
- Dispensing to multiple tellers using directional guides that deliver to the correct teller.
- Vault buy, permitting operator access to needed funds.
- Support for four, five or six denominations using Diebold's own superior Express Delivery XT dispenser.
- Cassette removal and replenishment without moving the entire dispensing unit or obstructing teller work space.
- Advanced friction-pick technology that ensures accurate, reliable bill counting and fast, smooth dispensing.
- Large-capacity, easy loading Diebold dispense cassettes.
- Complete needs analysis, system design, implementation and follow-through support.
- Fast, professional response from Diebold's proven service network.

Express Delivery XT also gives you the operational savings of a system with low life-cycle costs and minimal service requirements. The net effect is fast payback from a system that continues to deliver profitable performance long after recovering your investment.

Express Delivery XT features a compact footprint that fits existing facilities, so upgrading is easy and economical. Units are available to fit under a standard transaction line countertop, so they don't disrupt ease of movement within the teller station.

The Express Delivery XT Dispenser features cassettes that are durable, light-weight, and easy to handle. The Dispenser provides for two types of cassettes:

- Convenience; designed for fast and easy currency removal and replenishment, or
- Tamper Indicating; a key locking, single-insertion cassette that provides visual evidence of tampering.

Wherever teller cash-dispensing poses a security risk, Express Delivery XT adds protection.

First, Express Delivery XT limits cash drawer exposure, decreasing internal cash shortages linked to teller handling and recounting of cash. Second, Express Delivery XT adds security by keeping cash cassettes in a UL® 291 level 1 safe or optional UL 291 business hour chest, both featuring optimal dual access control. Enhance security even further with digital electronic locks, alarms and other Diebold security options.

Applications:

- Existing teller line
- In-store branch
- Vault environment
- Custom applications

Tellers appreciate Express Delivery XT benefits, including easy end-of-day balancing and an audit trail that tracks how many bills of each denomination have been dispensed, so they know when to replace or replenish cassettes.

Productivity gains mean fast system payback.

Express Delivery XT lets you build transaction volume while you cut transaction time, improve teller efficiency, reduce miscounts and significantly reduce reconciliation time at end of day.
